

# CASE OF THE MONTH

Education | Cases | Tips and tricks

Initial consultation and appointments (May 2017)

## CLINICAL OVERVIEW

A charming lady referred to us unhappy with her front teeth and central crowns. Poorly matched ceramic crowns with severe anterior crowding. There is a large overjet and an uneven gingival contour. A high lip line made this a challenging case.

## THE DETAILS

- Orthodontic treatment carried out by Dr J Alper using 14 Invisalign Co aligners to procline the UR2 to correct the gingival contour.
- Gingivectomy to UL1 to mirror gingival contour. No bone removal carried out to minimize complications and healing times. Healing time - 4 weeks.
- Tooth whitening carried out using enlighten home kit. Upper arch initially carried out using Aligner 13 and 14. Lower arch was bleached using a custom tray. Patient was eventually provided with a custom tray for the upper arch post crown cementation.
- Upper laterals were restored with IVOCOLAR e.max monolithic veneers. The centrals were restored in full coverage e.max crown restorations. ( HO, shade B1, neutral stump shade, min. characterization).

Post orthodontics (April 2018)

Gingivectomy (July 2018)

Final ceramic restorations in place (August 2018)

## PATIENTS FEEDBACK

Aug 17, 2

Very friendly and helpful staff. Dr Nasser and Dr Alper took great care to get me the best result with crowns/veneers and made sure I was happy with the process the whole way through and answered all of my questions! I am very pleased with the result and would recommend Gipsy Lane practice.

## REFLECTIONS & ADVICE

*"A high lip line leaves no where to hide! So we had to manage the gingival contours through orthodontic movement and minor surgical excisions to get the best possible aesthetics for the upper anteriors.*

*Good aesthetics also depends on getting the right shapes.*

*So don't be afraid to play and try out different shapes in the wax up stage and the temporaries.*

*And..... of course ....a huge helping of time and patience!!..*
